Attack	Asset at risk	Defence (action)
A1 on-bus injector (CAN access)		
DoS (ID 0x000 flood)	bus availability, telemetry freshness	detect: unknown-ID rate, total-rate ratio, RF
Fuzzy (random IDs)	bus availability, ECU behaviour	detect: many distinct unknown IDs, RF
RPM / gear / steering spoof	signal integrity (what the cloud sees)	detect: per-ID rate ratio, steering rate, speed mismatch
A2 network attacker (on the tunnel)		
Replay	freshness	reject: seq not newer (guard after tag check)
Tamper	batch integrity	reject: GCM tag fails
Wrong key / impersonation	device identity	reject: HELLO MAC fails, unknown id gets 'NO'
Rogue server	device trust, session key	abort: WELCOME MAC mismatch on module

Module is read-only: A1 is detected and alerted, not blocked.
All rejected packets and alerts raise cyber risk.
